

CHILD PROFILE

Name: Justin

Age: 5 years old

Background: Justin is a fun-loving and affectionate 5 year old boy who has a love for music. When Justin was about 15 months old, his parents began to worry because he had not started to walk. His neurologist diagnosed him as developmentally delayed and suggested physical therapy. After over six months of therapy at the age of two, Justin finally started walking. Unfortunately; the journey was far from over, in fact Justin began to worsen in every other area. At the age of two Justin was cognitively at the level of a 6 months old. Justin is now 5 years of age but is functioning between a 17-28 months level. Justin is diagnosed with Autism Spectrum Disorder.

Because Justin can't communicate his needs, he becomes frustrated, resulting in temper-tantrums which are very difficult to tame. Justin's disability have been a real challenge from potty training, which he has not yet mastered, to even going out in public. Justin's parents work constantly to help provide the services he needs, but still come up short. Unfortunately, the services Justin requires are not covered by insurance and are extremely costly and not affordable at to his parents. Justin is a very sweet boy who can make a major turnaround but he needs your help. Please keep in mind that all your donations are tax deductible and no donation is too small. Every little bit counts.

Need:

° Verbal Behavior Therapy -

Intensive intervention to develop and support communication and cognitive skills
10 hours per week recommended for a minimum period of one year
